Dashboard

How can I access the latest project I have worked on?

All recent projects are displayed on and accessible from the 'Dashboard' tab. Clicking on the blue pencil icon on the right-hand side will gain you access to the project.

How can I search for existing projects?

You can search for projects on the 'Dashboard' tab using the search box on the right-hand side. You can enter any key words you would like to search for, and/or select the relevant 'From' and 'To' dates, and/or select the name of the user on the account from the drop-down menu.

How can I make changes to an existing project?

The same way you would access a project you've previously worked on, by clicking on the blue pencil icon on the right-hand side of the project you wish to make changes to on the 'Dashboard' tab or the 'Projects' tab, to gain you access to the project. Please note that if your project does not appear under 'Latest projects' on the 'Dashboard' tab, it can be found on the 'Projects' tab by clicking on the 'Projects' button on the left-hand side once on the 'Dashboard' tab.

How can I save any information I enter on the toolkit?

When inputting information e.g. registering a new company/project/employees/stakeholders/details it can be saved by completing the process typically done by selecting the blue button in the bottom right corner of the page. The button may have different titles e.g. save/ submit/ create ..., depending on what it is that you are registering.

When working on a project, on any of the project's stages e.g. gap analysis/ materiality assessment/ actions & KPIs/ review & audit, any progress made is automatically saved and is marked by the pop-up 'Processing complete!' notification that appears on the top center point of the page. This does not only indicate that your progress has been saved but that the software has automatically processed the information and generated the corresponding results.

Companies

How can I add a new company?

You can add a new company by clicking on the 'Add new company' button under the 'Companies' page.

How can I delete an existing company?

You can delete an existing company by accessing the company's page (click on the blue pencil icon under the 'Companies' tab), and then under the 'Settings' tab select the 'Delete Company' button.

How can I sort the companies list?

On the right-hand side of each column title there is a set of 'up' and 'down' arrow icons. Clicking on the 'up' arrow will sort the column in ascending alphabetical order and the 'down' arrow in descending alphabetical order.

How can I search for an existing company?

All companies are found in the companies list. You can search the list using the search bar on the top right-hand side of the 'Companies' tab by typing in key words.

How can I make changes to an existing company's details?

Under the 'Companies' tab you will find a list of all the registered companies in your account. Clicking on the blue pencil icon on the right-hand side of the company you're looking to edit will gain you access to the company's details, including information relating to the contact person, the company's projects, its employees, its stakeholders, relevant actions and KPIs and the settings for your account

When editing a company's details, under the 'Companies' tab, I came across some tabs which were not there when I first added the company details on the toolkit i.e. Projects, Employees, Stakeholders, Actions and KPIs, Settings. Are they important to fill in?

They are, and we explain below how to fill them in.

Projects

Please see the relevant section below.

Employees

Why should I enter information on a company's employees?

Information under the Employees tab is important for establishing communication channels with the company and for keeping records of who was involved with the sustainability project each year.

How can I access the employees tab?

You must first access the company's page by clicking on the blue pencil icon found next to the company you want to access on the 'Companies' tab. The employees tab is the third tab found on the company's page.

How can I add a new employee?

You add a new employee and their relevant contact details by clicking on the 'Add New Employee' button. You should add all employees who were involved with the sustainability project the first time you use the CSR Analytics Pro toolkit.

You can also import an existing list of employees using the prescribed format by clicking on the 'Import Employees list'. A template will be available for download which you can import after inputting the desired list entries.

What does the 'Active' button refer to?

The 'Active' button is used to indicate if the employee is actively involved in the CSR/sustainability project. This is because an employee could be involved in the CSR/sustainability project one year, but not be involved the next year, and then be involved again the year after that.

How can I edit the details of an existing employee?

To edit the details of an existing employee, click on the blue pencil icon on the right-hand side of the employee you're looking to edit, to gain access to the employee's details.

How can I delete an existing employee?

To delete an existing employee, click on the trash can icon on the right-hand side of the employee you wish to delete.

How can I sort the employees list?

You can sort all inputted employees so that they appear alphabetically in ascending or descending order by clicking on the arrow icon on the right-hand side of: 'Name', 'Job Position', 'Email' and 'Phone'.

How can I search for an existing employee?

All employees are found in the employees list. You can search the list using the search bar on the top right-hand side of the 'Employees' tab by typing in key words.

Stakeholders

What do you mean by stakeholders?

ISO 26000 defines a stakeholder as: "an individual or group that has an interest in any decision or activity of an organisation". Stakeholders can be classified into two groups, internal and external stakeholders. Internal stakeholders are entities or individuals found within the organisation's structure e.g. employees, board of directors etc. External stakeholders are entities or individuals found outside the organisation's structure and for which the description given above applies e.g. customers, suppliers, banks or other credit institution, relevant government bodies etc. The external stakeholders list can be an extensive one and an organisation may find it difficult to single out all its stakeholders. In such a case, a stakeholder identification procedure can aid an organisation and consists of a set of questions outlined in the ISO 26000 standard under the 5.3.2 Stakeholder identification section.

Why should I enter information on a company's stakeholders?

Information under the Stakeholders tab is important for establishing communication channels with the company and for keeping records of who was involved with the sustainability project each year.

How can I access the Stakeholders tab?

You must first access the company's page by clicking on the blue pencil icon found next to the company you are looking to access on the 'Companies' tab. The stakeholders tab is the fourth tab found on the company's page.

How can I add a new stakeholder?

You add a new stakeholder and their relevant contact details by clicking on the 'Add New Stakeholder' button. You should add all stakeholders who were involved with the sustainability project the first time you use the CSR Analytics Pro toolkit.

You can also import an existing list of stakeholders using the prescribed format by clicking on the 'Import Stakeholders list' button. A template will be available for download which you can import after inputting the desired list entries.

Stakeholders can also be added by clicking on the 'Add new stakeholder' button on the 'Materiality Assessment' tab (this is explained further in the Materiality Assessment section).

What does the 'Active' button refer to?

The 'Active' button is used to indicate if the stakeholder is actively involved in the CSR/sustainability project. This is because a stakeholder could be involved in the CSR/sustainability project one year, but not be involved the next year, and then be involved again the year after that.

How can I edit the details of an existing stakeholder?

To edit the details of an existing stakeholder, click on the blue pencil icon on the right-hand side of the stakeholder you're looking to edit, to gain access to the stakeholder's details.

How can I delete an existing stakeholder?

To delete an existing stakeholder, click on the trash can icon on the right-hand side of the stakeholder you're looking to delete.

How can I sort the stakeholder list?

You can sort all inputted stakeholders so that they appear alphabetically in ascending or descending order by clicking on the arrow icon on the right-hand side of: 'Name', 'Job Position', 'Email' and 'Phone'.

How can I search for an existing stakeholder?

All stakeholders are found in the stakeholders list. You can search the list using the search bar on the top right-hand side of the 'Stakeholders' tab by typing in key words.

Actions & KPIs

Actions & KPIs pertaining to a specific project for a specific year, can be entered and edited at the Project level. Actions & KPIs from several projects of a company, over several years, can be viewed and compared at the company level, but not edited.

For support on how to enter and edit Actions & KPIs for your project(s), please see the relevant section below.

Settings

Please see the relevant section below.

New Project

How can I create a new project?

If it is a project of an existing (already registered) company then you can click on the '+ New Project' tab and proceed with filling in the information needed on that page. If the project is of a new company then you should first add a new company by clicking on the '+ Add New Company' button and then proceed to the '+ New Project' tab, as described above.

Projects

How do I add a new project?

Under the 'New Project' tab you can input the new project's details and click on 'Create Project' to add it to the projects list.

How do I begin working on a project in order to be able to develop a CSR/sustainability strategy?

First you must select the project you wish to work on from the existing 'Project List' under the 'Projects' tab by clicking on the blue pencil icon on the right-hand side. This will gain you access to

the project you wish to work on. Projects follow a linear sequence, meaning that the stages of work to be carried out appear in a successive order, starting from the 'Gap Analysis' to the 'Materiality Assessment', the 'Actions & KPIs' and finally the 'Review & Audit' stage.

How do I edit an existing project?

You must first access the project by clicking on the blue pencil icon next to the project you wish to edit on the 'Projects' tab. You can then navigate to the specific project stage where you want to edit the information (i.e. Gap Analysis, Materiality Assessment, Actions & KPIs, Review & Audit, Settings).

How can I search for existing projects?

All existing projects are found in the projects list on the 'Projects' tab. You can search the list using the search bar on the top right-hand side of the 'Projects' tab by typing in key words.

How do I delete an existing project?

You must first access the project you wish to delete by clicking on the blue pencil icon next to the project you wish to edit on the 'Projects' tab. You then click on the 'Settings' tab (the fifth tab) and finally on the 'Delete Project' button. A pop-up window will appear asking you if you are sure you want to delete this project. If you click 'yes', the project will be **permanently deleted**.

Gap Analysis

Edit

What is the Gap Analysis?

The CSR Analytics Pro toolkit, as explained in the introduction on the 'Dashboard' tab, is based on the ISO 26000 standard – the international standard on social responsibility. It follows the approach prescribed by the standard for supporting a company in establishing a CSR/Sustainability strategy.

The first step in the process is the Gap Analysis, which is based on ISO 26000 and consists of 7 Core Subjects, which are made up of 41 Issues of Interest, which are made up of 313 Key Considerations in total. A company undertaking a Gap Analysis will be evaluated based on the 313 key considerations, by selecting for each consideration what the 'Company Performance' score is and what the 'Relevance & Significance' score is. The **company performance score** represents how well the organisation is performing in that specific parameter and the **relevance & significance score** represents the extent to which each key consideration is applicable to the organisation.

What is the connection between a Core Subject, an Issue of Interest and a Key Consideration?

The ISO 26000 is based on seven Core Subjects, which jointly cover the broad scope of the three dimensions of sustainability i.e. economic, social and environmental. Each Core Subject is then broken down into issues of a more focused scope known as Issues of Interest e.g. for the Core Subject 'Human Rights' an Issue of Interest is 'Discrimination and vulnerable groups'. These in turn are further broken down into Key Considerations specific enough to focus on tangible company practices, activities or situations e.g. for the Core Subject 'Human Rights' and its Issue of Interest 'Discrimination and vulnerable groups', Key Considerations are 'Rights of people with disabilities', 'Equal employment opportunities' or 'Cultural and religious diversity'.

How does the Gap Analysis work?

To begin working on the Gap Analysis and inputting the company performance and relevance & significance scores, click on the 'Edit' button under the 'Gap Analysis' tab. The 313 Key Considerations can then be found under each of the 7 Core Subjects and their corresponding Issues of Interest on the Gap Analysis page.

When all scores have been assigned for all 7 Core Subjects, this will be indicated by '100%' on the green progress bars for each Core Subject and for the Total bar under the 'Gap Analysis' tab.

To view the results of the Gap Analysis, click on the 'Results' button. To understand the different Gap Analysis Results, please refer to the relevant question below.

When evaluating Company Performance scores, what do the three “excessive” scores mean and what situation can they be used for?

The “excessive” scores of 5 to 7 when evaluating Company Performance indicate ‘over-performance’ by the organisation, which is something that can insinuate “greenwashing”. In this case, “greenwashing” refers to the act by which an organisation may falsely give the impression that it is an overall high-CSR/sustainability performer when in fact, it over-allocates resources to just a limited number of issues which may not be that relevant and significant to the organisation’s core business activities. The excessive scores, once selected, can show that an organisation goes “over and above” what is required on specific Key Considerations, indicating that the organisation would be better off re-allocating its limited resources to focus on Key Considerations which are more relevant and significant to its core business activities. Consequently, the allocation of “excessive” scores of 5 to 7 entails a penalisation mechanism for organisations, which gives the message that the organisation should re-allocate resources more efficiently and righteously.

What do the different ‘Relevance & Significance’ scores displayed on the Gap Analysis page mean?

A Relevance & Significance score is calculated automatically by the software at every level i.e. Key Consideration (on the right-hand side of the Key Consideration), Issue of Interest (below each Issue of Interest), and Core Subject (below each Core Subject). The Relevance & Significance score reflects how relevant and significant a key consideration/ issue of interest/ core subject is to a company. The average of all Relevance & Significance scores assigned to Key Considerations under an Issue of Interest is the Relevance & Significance score assigned to that Issue of Interest. Similarly, the average of all Relevance & Significance scores assigned to Issues of Interest under a Core Subject, is the Relevance & Significance score assigned to that Core Subject. Finally, a company’s ‘Overall Relevance’ score, found on the top right corner of the gap analysis page is determined by the average of all Relevance & Significance scores assigned to the seven Core Subjects, and represents the extent to which the ISO 26000’s social responsibility principles apply to the company overall.

What do the different ‘Weight’ scores displayed on the Gap Analysis page mean?

A weight score is calculated automatically by the software at every level i.e. Key Consideration (on the right-hand side of the Key Consideration), Issue of Interest (below each Issue of Interest), and Core Subject (below each Core Subject). The weight of each Key Consideration is its relevance and significance score’s proportion of the sum of relevance and significance scores of all Key Considerations under the same Issue of Interest. Similarly, the weight of each Issue of Interest is its

relevance and significance score's proportion of the sum of relevance and significance scores of all Issues of Interest under the same Core Subject.

What is the W. P. score and why is it important?

W. P. stands for Weighted Performance and is obtained by multiplying a key consideration's/issue of interest's/core subject's weight score by its performance score. Adding all the weighted performance scores of a group of key considerations/ issues of interest/ core subjects will give the higher level's performance score. For example, adding the weighted performance scores of all key considerations under the 'Discrimination and vulnerable groups' issue of interest will give the performance score of that issue of interest. Then, adding the weighted performance scores of that issue of interest along with those of the remaining issues of interest under the same core subject will give the performance score of the 'Human Rights' core subject. Then, adding all the weighted performance scores of all the core subjects will give the performance score of the company overall.

How can I add a note and what are notes used for?

You can add a note by selecting the blue paper symbol found on the right-hand side of a key consideration on the Gap Analysis tab, once you click on the 'Edit' button. Notes can be useful in justifying any scores a user believes might seem odd or unjustified or as a reference for when reviewing these scores in the future. Notes can be especially helpful in cases when over-performance is allocated to a key consideration, and is consequentially penalised, where the details behind the user's reason for his choice of score can be noted down for other users to read and for future reference.

Results

What do the 'Gap analysis tables' demonstrate?

These tables simply present what has been inputted by the user in the Gap Analysis page i.e. the scores assigned for the 'Company performance' and 'Relevance & Significance'.

To display the table you wish to view, select the relevant Core Subject and Issue of Interest from the drop-down menu. You can also sort the Key Considerations you view in the table for each Issue of Interest by selecting the relevant Company Performance e.g. 'All', '0-2', '3' and '5-7'.

You can export a table and save it on your computer for inputting into reports/presentations/etc., by clicking on the 'Export' button. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

In the results section, what do the 'Performance vs. Relevance' tables demonstrate?

These tables present how major or minor each Key Consideration is for the company, with respect to being socially responsible according to ISO 26000. Hovering over the Major/Minor result in the 'Issue Level' column will reveal the 'Performance vs. Relevance Matrix' for that Key Consideration, illustrating how critical that consideration is in further detail, based on the company's performance with regard to that consideration and the consideration's relevance & significance to the company.

To display the table you wish to view, select the relevant Core Subject and Issue of Interest from the drop-down menu.

You can export a table and save it on your computer for inputting into reports/presentations/etc., by clicking on the 'Export' button. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

What do the 'Performance vs. Relevance by Core subject' tables demonstrate?

These tables group Key Considerations and Issues of Interest by Core Subject and sort all Key Considerations by Issue Level in descending order of criticality i.e. 'most' Major through to 'most' Minor. Hovering over the Major/Minor result in the 'Issue Level' column will reveal the 'Performance vs. Relevance Matrix' for that Key Consideration, illustrating how critical that consideration is in further detail, based on the company's performance with regard to that consideration and the consideration's relevance & significance to the company.

To display the table you wish to view, select the relevant Core Subject from the drop-down menu.

You can export a table and save it on your computer for inputting into reports/presentations/etc., by clicking on the 'Export' button. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

What does the 'Performance vs. Relevance Status Report' demonstrate?

This status report groups together all Key Considerations which have been classified as Major Issues or Minor Issues under a specific Issue of Interest under a specific Core Subject.

To display the table you wish to view, select the relevant Core Subject and Issue of Interest from the drop-down menu.

You can export a table and save it on your computer for inputting into reports/presentations/etc., by clicking on the 'Export' button. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

What does the 'Overall Company Performance by Core Subject' illustrate?

This table presents, in percentages, the total weight for each Core Subject, where weight is directly proportional to that Core Subject's relevance & significance to the company based on ISO 26000, demonstrating that Core Subject's importance in the company's operations, and the company's overall performance for that Core Subject. How these percentages are calculated is explained in detail in the W.P. (Weighted Performance) section.

The pie chart at the end presents visually the overall performance and total weight of each Core Subject for the company. Each piece of the pie represents a Core Subject. The colour of each piece of the pie indicates the company's overall performance for that Core Subject, as per the 'Performance Colour Grading' legend on the left-hand side. The size of each piece of the pie represents that Core Subject's total weight. Hovering over a piece of the pie will reveal the name of the Core Subject and the exact percentage values for each Core Subject's weight and performance score.

You can export the table and pie chart and save it on your computer for inputting into reports/presentations/etc., by clicking on the 'Export' button. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

Materiality Assessment

Edit

What is the Materiality Assessment?

The CSR Analytics Pro toolkit, as explained in the introduction on the 'Dashboard' tab, is based on the ISO 26000 standard – the international standard on social responsibility. It follows the approach prescribed by the standard for supporting a company in establishing a CSR/Sustainability strategy.

The second step in the process is the Materiality Assessment, which is also based on ISO 26000 and on the results of the company's Gap Analysis. The aim of the materiality assessment is to help the company understand which issues under ISO 26000 are material i.e. highly relevant & significant, to the company. To make this assessment, the company needs to have first gathered the views of all of its important stakeholders, to include internal stakeholders (i.e. employees) and external stakeholders.

What are the 'Edit Core Subjects' and 'Edit Issues of Interest' buttons for?

The '**Edit Core Subjects**' button is used to enter new stakeholders, select the stakeholders' class and re-arrange in descending order of importance the Core Subjects as indicated by the numbering of 1-7 on the right-hand side (where 1 is the most important and 7 is the least important), which allocates a relevance & significance score to each Core Subject. When all fields are completed, the 'Core Subject Materiality Matrix' will automatically be produced. The Materiality Matrix for Core Subjects will help the company visualise and select the Core Subjects of highest concern for addressing in its CSR/Sustainability Strategy.

The '**Edit Issues of Interest**' button is used to re-arrange in descending order of importance the Issues of Interest for each of the four most important Core Subjects, as indicated by the numbering on the right-hand side (where 1 is the most important). The four most important Core Subjects are determined by their overall relevance & significance score calculated through mechanisms taking into account both the internal and external stakeholders' views. When all fields are completed the 'Issue of Interest Materiality Matrix' will automatically be produced. The Materiality Matrix for Issues of Interest will help the company visualise and select the Issues of Interest of highest concern for addressing in its CSR/Sustainability Strategy.

How does the Materiality Assessment work: The 'Edit Core Subjects' button

To begin working on the Materiality Assessment, click on the 'Edit Core Subjects' button under the 'Materiality Assessment' tab, to go to the Materiality Assessment – Core Subjects page. You then need to search for and select the relevant company stakeholders. To be able to search for a stakeholder, you must have first entered the relevant details for that stakeholder. You can click on 'Add New Stakeholder' button to do so. The company, which is also a stakeholder as in this case it represents the views of its internal stakeholders i.e. its employees, will appear automatically in the stakeholders list.

Once a stakeholder has been selected, you need to select how important that stakeholder is to the company, by selecting which class they belong to, where Class A indicates the stakeholder is critical to the company's operations, Class B indicates the stakeholder is of average importance to the company's operations and Class C indicates the stakeholder is of low importance to the company's operations. The company as a stakeholder is given different treatment given that it must carry the same weight as all the external stakeholders' combined weight.

Once you have selected the Class of the stakeholder, you need to re-arrange the Core Subjects that appear on the list in descending order of importance, as indicated by the numbering of 1-7 on the right-hand side (i.e. where 1 is the most important and 7 is the least important). You can do so by selecting, dragging and dropping each Core Subject so that you change its position on the list. The numbers on the right-hand side automatically update accordingly.

Results

Where can I see the Materiality Matrices?

Click on the 'Results' button under the Materiality Assessment tab. A tab for each materiality matrix (i.e. Core Subjects and Issues of Interest) is available.

You can export each Materiality Matrix and save it on your computer for inputting into reports/presentations/etc., by clicking on the 'Export' button. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

What is a Materiality Matrix – Core Subjects?

A Materiality Matrix – Core Subjects illustrates the relevance of each core subject displayed with respect to the company and to the stakeholders. The horizontal axis, 'Relevance to Company', represents how relevant the company believes the core subject is to its operations, and the vertical axis, 'Relevance to Stakeholders' represents how relevant the stakeholders believe the core subject is to their operations.

What is a Materiality Matrix – Issues of Interest?

A Materiality Matrix – Issues of Interest illustrates the relevance of the issues of interest displayed with respect to the company and to the stakeholders. The horizontal axis, 'Relevance to Company', represents how relevant the company believes the issue of interest is to its operations, and the vertical axis, 'Relevance to Stakeholders' represents how relevant the stakeholders believe the issue of interest is to their operations.

What does the Relevance to Company score refer to?

Explained in the 'What is a Materiality Matrix – Core Subjects?' section

What does the Relevance to Stakeholder score refer to?

Explained in the 'What is a Materiality Matrix – Issues of Interest?' section

What does the Overall Relevance score refer to?

Given that the company has the same weight as the stakeholders combined, the overall score is determined by taking the average of the two scores (relevance to company and relevance to stakeholders scores).

Actions & KPIs

What are Actions and KPIs?

The **Actions & KPIs** (Key Performance Indicators) are critical for the CSR/sustainability strategy stage. They allow a company to monitor and track their performance in relation to a specific CSR/sustainability project over time. They are specific to each project the company is involved in. Companies can have multiple projects.

How can you add Actions & KPIs?

To enter Actions & KPIs, select the 'Actions and KPIs' tab from the project's page. You then need to click on 'Add Issue of Interest' and select the Issue of Interest you wish to add actions and KPIs for using the drop-down menu. You then need to type in the relevant boxes, action(s) and KPI(s). You can use the 'Materiality Matrix – Issues of Interest' graph on the right-hand side to view the Issues of Interest which need addressing. You can hover over each of the Issues of Interest in the Materiality Matrix, displayed using unique numbering, to see which Issue of Interest it is.

The 'Baseline Performance' will need to be inputted by the user for the first year of the CSR/sustainability project but will appear automatically for all subsequent years. Please add as many Actions and KPIs for as many Issues of Interest as you would like.

How do I proceed with selecting the Issues of Interest I want to address in the company's CSR/Sustainability strategy?

This is done in the 'Actions & KPIs' tab, as explained above.

How is the information I've inputted in the 'Actions and KPIs' tab useful to my company?

This information is useful in more than one ways. Firstly, actions and KPIs that have been set up to address the company's existing gaps and identified material issues under ISO 26000, and are the basis for the whole CSR/sustainability strategy of the company.

Secondly, the user is not only granted the option of inputting the current year's information, but can also review what the specific issue's historic performance has been, on a yearly basis, in order to compare and assess how well the company is performing with respect to the KPIs targets it has set.

Please note that Actions & KPIs can be quantitative and/or qualitative and can be viewed by a company as objectives and targets that will guide the company towards materialising its intentions of improving its social responsibility. They are developed exclusively by the user. If you require support for setting Actions and KPIs that pertain to your company's gaps and material uses under ISO 26000, please email info@aspon.com.cy.

What if my organisation has met its Actions & KPIs and needs no further improvement on that issue?

Maintaining a satisfactory level of performance is equally important to achieving that level of performance in the first place. Therefore, Action & KPI performance for a specific issue of interest should always be reported on and monitored for avoiding negligence and under-performance. In other words, you will have to keep inputting performance figures for that specific issue to ensure performance isn't allowed to drop below a certain level.

Do Actions & KPIs relate to the Company as a whole or to a specific Project under each Company?

Actions & KPIs are specific to a project under each company, and not to the company as a whole. This is because each project will have its own set of Actions & KPIs, that might change every year. It is assumed that each project refers to one year worth of data. A company can have multiple projects i.e. multiple years of data. Therefore Actions & KPIs can only be inputted on the toolkit under the Project level.

Information from several projects of a company over several years can be viewed and compared at the company level, but not edited.

How can I edit existing Actions & KPIs?

You can edit an existing action & KPI by selecting the blue pencil icon that can be found next to the desired action & KPI.

How can I delete existing Actions & KPIs?

You can delete an existing action & KPI by selecting the trash icon that can be found next to the desired action & KPI.

How can I sort existing Actions & KPIs?

On the right-hand side of each column title there is a set of 'up' and 'down' arrow icons. Selecting the 'up' arrow will sort the column in ascending alphabetical order and selecting the 'down' arrow will sort the column in descending alphabetical order.

How can I search for existing Actions & KPIs?

All actions & KPIs are found in the actions & KPIs list. You can search the list using the search bar on the top right-hand side of the 'Actions & KPIs' tab by typing in key words.

Review & Audit

What is the ISO 26000 Audit Checklist and how can I use it?

The checklist consists of a set of questions which address all the stages and activities that should be carried out in a project. You can indicate that you have addressed a specific issue by clicking on the bar on the right-hand side of that issue, which will then turn blue from grey. If you are in a position to turn all bars blue, then this means that you have successfully carried out this project

What is the UN Global Compact Annual Review Checklist and how can I use it?

The UN Global Compact is based on 10 principles addressing five principal elements of corporate sustainability such as management, human rights, labour, environment and anti-corruption. You can use the UN Global Compact Annual Review Checklist to test your company's performance on all ten UN Global Compact principles and how well these issues are managed. To indicate that you have addressed a specific issue click on the bar on the right-hand side of that issue, which will then turn blue from grey. If you are in a position to turn all bars blue, then this means that you have successfully carried out this project.

You can also export the results by clicking on the 'Export' button on the top right-hand side. A pop-up window will appear; click on 'Download' to save the image onto your computer. Clicking on 'Return' or the 'x' on the top right-hand side will take you back to the tool.

Ranking

What does ranking do?

Ranking is a feature that allows an Administrator to rank and compare entities of lower authorisation levels within the same network e.g. a supplier can rank and compare its factories, a metaclient can rank and compare its suppliers and so on.

How does ranking work?

Ranking can be done as soon as a gap analysis is completed for each entity in question. The ranking process follows two elemental steps - grouping and ranking.

- It first groups the evaluated entities with respect to their sector, industry, and level of impact. The information used for grouping is obtained from the companies' registration details e.g. sector and industry, and their overall relevance & significance scores from the gap analysis are used to determine their level of impact.
- It then ranks all entities within the same group with respect to their overall company performance score. The higher the score, the higher the rank.

Why do I need to select a year?

A year must be selected since all entities in question must be ranked and compared with respect to the same year's data.

Why do I need to select a sector and industry?

Companies in different sectors and industries inherently have different impacts on the economy, society and environment. It would therefore be unfair to compare, say, a company of high impact, e.g. a shoe manufacturing company, to a company of low impact, e.g. a consulting firm, since it would be easier for the one with lower impact, to score higher and improve its performance compared to a company of higher impact.

What is Low, Medium and High Impact?

Levels of impact are used to differentiate companies within the same industry. For example, two food suppliers, both within the food and beverage industry, can have a different impact if they supply different types of food e.g. one supplies vegetables and the other supplies meat.

The range of relevance scores of companies under a specific group (i.e. who fall in the same sector and industry) is automatically divided into three sub-ranges, namely the low-, medium- and high-impact ranges. A company's level of impact is determined by which sub-range (i.e. Low-, Medium- or High-Impact) its relevance & significance score falls under.

Companies grouped under the same impact level are then ranked with respect to their company performance score.

Settings

How can I access the Settings tabs?

There are 3 separate settings tabs available on the toolkit; for the Account as a whole; for a specific Company; and for a specific Project.

- The account settings can be accessed by selecting the circle icon with the user's initials on the top right corner of the homepage, which will reveal a drop-down menu. Selecting the 'My profile' option from the drop-down menu will take you to your account's settings.
- The company settings can be accessed by entering the desired company's page (click on the blue pencil icon next to the company under the 'Companies' tab) and selecting the 'Settings' tab.
- The project settings can be accessed by entering the desired project's page (click on the blue pencil icon next to the project under the projects list) and selecting the 'Settings' tab.

Account Settings

How can I edit/view my account profile?

Selecting the circle icon with the user's initials on the top right corner of the homepage will display a drop-down menu. Selecting the 'My profile' link will direct you to your account profile where you can edit your details.

How can I edit/view my company details?

Selecting the circle icon with the user's initials on the top right corner of the homepage will display a drop-down menu. Selecting the 'My company' link will direct you to your company profile where you can edit your details.

How can I change my account password?

You must first access the 'My profile' page, by clicking on the circle icon with the user's initials on the top right corner of the homepage, which will display a drop-down menu. After accessing the 'My profile' page you must select the 'Change Password' tab next to the 'Details' tab. Please type in your current password and new password.
